

ABSTRACT OF THE DISCLOSURE

An automotive fuel hose of low fuel permeability, and excellent in impact resistance, hydrolysis resistance, and inter-layer adhesion. The automotive fuel hose comprises: a tubular inner layer (1) in which fuel is adapted to flow, the inner layer comprising a fluororesin having a functional group; a low fuel permeability layer (3) provided about an outer peripheral surface of the inner layer comprising a polyester resin having a naphthalene ring; and an adhesive layer (2) for bonding the inner layer and the low fuel permeability layer comprising a blend of polyamide resin and polyester resin.
